Summit Hills Irrigation Supply & Demand

(C) 2002-2003 Green Leaf Mapping & Control Systems. All rights reserved.

The "Weekly Irrigation Supply and Demand" chart shows how the irrigation supply at your site tracks with the seasonal weather demand in its area. The seasonal demand is represented by the dots and the bell shaped curve connecting them. The supply is represented by the vertical bars. Bars higher than the curve indicate relative over watering. Months where no irrigation is applied are indicated by the **OFF** flag.

The savings achieved are reported in the tables located to the left. The savings are calculated based on previous years' water usage history.
